과제 1 소스코드

```
#include <stdio.h>
#define _CRT_SECURE_NO_WARNINGS
int main()
{
    int min, max;
    int arr[10001] = \{ 0, \};
    int resultCount = 0;
    printf("min :");
    scanf_s("%d", &min);
    printf("max :");
    scanf_s("%d", &max);
    for (int j = min; j <= max; j++)</pre>
        arr[j] = j;
    for (int k = min; k \le max; k++)
        int index = 1;
        for (int num = 2; num * num <= arr[k]; num++)</pre>
            if (arr[k] \% (num * num) == 0)
                 if (arr[k] / (num * num) == 1)
                     index = 0;
                     break;
            }
        if (index)
            if (k != 1)
                resultCount++;
        }
    }
    printf("제곱 ㄴㄴ수 : %d개\n", resultCount);
    return 0;
}
```
